

Won-Door Fire Exit Hardware (FEH)

Won-Door can be programmed to open back up for egress in the event of alarm activation. The door will open by pressing the Fire Exit Hardware. The FEH is located on both sides of the Won-Door and is set at a height so people in a wheelchair can still gain egress by rolling into the panel.

There are two parameters to be set regarding the Fire Exit Hardware;

- 1. The distance you want the Won-Door to re-open.**
This can be set anywhere from 813mm to the full width of the opening.
- 2. The length of time the Won-Door will remain open for until it seeks to re-close?**
This can be anywhere from 3 to 30 seconds.
